

9

$$f(x) = x^2 - 6x - 3a + 18$$

(1) $f(x) = (x-3)^2 - 3a + 9$

顶点 $(3, -3a+9)$

(2) (i) $0 \leq a \leq 8$ $a < 0$ $0 \leq a$

$$m(a) =$$

(ii) $0 \leq a \leq 8$ $a < 0$ $0 \leq a$

$$m(a) =$$

(iii) $0 \leq a$

$$m(a) =$$

(3) $0 \leq a \leq 8$ $0 \leq a < 0$ $m(a)$ の最大値、最小値を求めよ。

解. $m(a) = 4$ となる a の値を求めよ。

解

- (3) (i) $(3, -3a+9)$ (ii) / (iii) $a^2 - 5a + 10$ (iv) 3
- (4) $(4) -3a+9$ (5) $a^2 - 9a + 18$ (vi) 0 (vii) 8
- (5) (vi) 10 (vii) $\frac{9}{2}$ (viii) $-\frac{9}{4}$ (ix) $\frac{5}{3}$ (x) 7
